CORRIGENDUM

CASE NO. AD(OI) – 03/2025

Subject: Corrigendum to the final findings in the anti-dumping investigation concerning imports of “Low Ash Metallurgical Coke” originating in or exported from Australia, China PR, Colombia, Indonesia, Japan and Russia.

1. Having regard to the Customs Tariff Act, 1975, as amended from time to time (hereinafter also referred to as the “Act”), and the Customs Tariff (Identification, Assessment and Collection of Anti-Dumping Duty on Dumped Articles and for Determination of Injury) Rules, 1995, as amended from time to time (hereinafter also referred to as the “Rules”), the Designated Authority (hereinafter also referred to as the “Authority”) issued final findings vide Notification No. 6/03/2025-DGTR dated 28th April 2026 (hereinafter referred to as the “final findings”) in the anti-dumping investigation concerning imports of “Low Ash Metallurgical Coke” (hereinafter referred to as the “subject goods”) originating in or exported from Australia, China PR, Colombia, Indonesia, Japan and Russia (hereinafter referred to as the “subject countries”), recommending imposition of anti-dumping duty on imports of the subject goods from the subject countries. On the basis of the said recommendation, the Department of Revenue has imposed anti-dumping duty vide Notification No. 18/2026-Customs (ADD) dated 27th July 2026
2. The Authority, in paragraph 26 of the final findings, excluded from the scope of the product under consideration ultra-low phosphorous metallurgical coke for use in ferroalloy manufacturing and LAM Coke of size 20–40 mm for use in blast furnaces up to 130 m³ for pig iron manufacturing, subject to actual user conditions. The Authority further clarified in paragraphs 326 and 327 of the final findings that the said exclusions have been granted on actual user condition basis and that such imports shall be made without payment of anti-dumping duty only if imported by the actual user. The note below the Duty Table appended to paragraph 333 of the final findings accordingly provides that the said exclusions are subject to imports by the actual user and furnishing of an appropriate and legally enforceable undertaking before the Customs authorities regarding bona fide imports and end use, and in the case of LAM Coke of size 20–40 mm, a valid certificate issued by the concerned State Pollution Control Board or Central Pollution Control Board certifying the capacity of the blast furnace of the user.

3. In order to provide clarity to the Customs authorities and to ensure that the benefit of the exclusions is extended only to eligible actual users for the specified end use, the Authority considers it appropriate to specify that the actual user condition shall be implemented by Customs in accordance with the Customs (Import of Goods at Concessional Rate of Duty or for Specified End Use) Rules, 2022.
4. Accordingly, the note below the Duty Table appended to paragraph 333 of the final findings shall be substituted and read as under:

*“*Low Ash Metallurgical Coke that is, Metallurgical Coke having ash content below 18% excluding the following:*

- a. *ultra-low phosphorous metallurgical coke with phosphorous content up to 0.030% with size upto 30 mm with 5% size tolerance for use in ferroalloy manufacturing. This exclusion is subject to actual user condition satisfying Note 1 given below;*
- b. *semi-coke or soft coke;*
- c. *LAM Coke of size 20–40 mm (with a mean size of approximately 30 mm $\pm$ 2 mm) for use in blast furnaces up to 130 m³ for pig iron manufacturing. This exclusion is subject to actual user condition satisfying Note 1 given below.*

Note 1: The exclusions at (a) and (c) above shall be available only where the goods are imported by the actual user for its own consumption in the specified end use, subject to furnishing of an appropriate and legally enforceable undertaking before the Customs authorities regarding bona fide imports and end use. In the case of the exclusion at (c) above, the actual user shall also furnish a valid certificate issued by the concerned State Pollution Control Board or Central Pollution Control Board, as applicable, certifying the capacity of the blast furnace of the user, and the exclusion shall not be applicable for any other use or any other furnace size. The actual user condition would be implemented by Customs at the time of clearance of goods at the Customs port by following the Customs (Import of Goods at Concessional Rate of Duty or for Specified End Use) Rules, 2022.”

5. The above does not alter the scope of the product under consideration, the exclusions, or the anti-dumping duty recommended in the final findings, and only clarifies the manner of implementation of the actual user condition already recommended by the Authority.
6. All other contents of the final findings dated 28th April 2026 shall remain unchanged.
